Need more than self-service?

If self-service plans no longer fit your buying model or operational requirements, OpenWeather Enterprise offers a more structured service with contracts, licensing flexibility, onboarding, and support for business-critical use cases.

Enterprise Service

When self-service is no longer enough

OpenWeather Enterprise provides contract-based access to OpenWeather's broadest weather, forecast, alerting, mapping, historical, and specialist-data capabilities, combined with enterprise licensing, SLA-backed service, procurement support, and dedicated account management.

Stay with self-service if you need:

- fast onboarding
- standard pricing
- standard commercial use
- direct subscription
- standard terms and limits

Move to Enterprise if you need:

- a contract or invoicing
- procurement or legal review
- broader licensing or custom terms
- onboarding and account support
- a service for operationally critical or multi-team use

How automatic API subscriptions work

Self-service subscriptions

Self-service plans are built for developers, data scientists, businesses, and product teams who need immediate API access to globally available, high-coverage weather data delivered through reliable, production-grade infrastructure. Our datasets provide broad geographic reach and trusted weather information used worldwide, allowing teams to build and scale independently under standard public terms.

Included

- Immediate online activation
- Independent subscription management
- API access under the ODbL licence
- Commercial and non-commercial use
- Technical support via our Support Centre
- Published, predictable pricing

Licence Requirement

- Visible attribution to OpenWeather in your application or service

Not Included

- Contract negotiation or customised terms
- Procurement or compliance documentation
- Dedicated account management
- Modified attribution conditions
- Enterprise service commitments

Self-Service Subscription Process

Create an Account

- **Sign up** with your email address. Your API key is generated automatically and available in your account.

Choose a Plan

- Select a **subscription** based on the endpoints, usage limits, and call volume you need.

Subscribe online

- Complete the billing form and confirm payment.
- Your API key is activated immediately after payment.

You can view, upgrade, downgrade, or cancel your subscription at any time in your account settings.

License

All automated self-service plans are provided under the ODbL (Open Database License). Commercial use is allowed.

Standard commercial use - Attribution

If you use OpenWeather data to power:

- Mobile apps
- Websites
- SaaS platforms
- Dashboards
- Analytics tools
- Internal business systems etc.

You only need to:

- Provide visible attribution to OpenWeather

This does **not** require you to:

- Open-source your application
- Share your product code
- Disclose your business logic

Adapted Weather Databases - Share-Alike

Share-alike applies only if you:

- Build a reusable dataset from OpenWeather data
- Restructure, combine, or enrich it
- Operate your own weather dataset or API based on stored OpenWeather data
- Make that dataset or API available outside your organisation

If the result remains fundamentally weather data derived from OpenWeather, the nature of the data has not changed.

If such a database is distributed externally, it must be offered under the same ODbL license.

In most commercial use cases, you only need to provide **attribution** on the screen or page where weather data appears.

Attribution placed only in hidden documentation or deep legal pages is not sufficient.

Recommended line:

Weather data © OpenWeather

Support & Service Model

- All support is provided via our [Help Desk ticket system](#)
- No phone support is offered
- Written support ensures clear, traceable responses

Professional and Expert plans receive **priority response** in the support queue.

Billing & Payments

Payment Methods

- Credit & debit cards (Visa, MasterCard, American Express, UnionPay)
- Apple Pay, Google Pay, Stripe Link, WeChat Pay, Alipay+, Revolut Pay
- Bank transfers (available for selected plans and longer terms)

Cash and checks are not accepted.

Recurring Billing

- Your card is charged immediately upon subscription
- Billing repeats automatically each billing cycle
- Pricing changes are communicated in advance

Invoices and payment history are available in your account dashboard.

Subscription Management & Cancellation

- Subscriptions renew automatically each billing period
- You can cancel anytime; access remains until the end of the paid cycle
- No partial refunds or proration
- Upgrades apply immediately; downgrades take effect next cycle

Accounts can be deleted at any time from the [Privacy Centre](#).

Usage Limits, Reliability & Security

- Each plan includes defined usage limits; overage fees may apply
- Service uptime and data accuracy are continuously monitored
- Weather data accuracy may vary due to external factors
- Industry-standard security and data protection practices are applied

Need enterprise-grade service or custom terms?

terms.

Enterprise Service is a contract-based service designed for organisations that require:

- A negotiated commercial agreement, SLA (not ODbL)
- Procurement and compliance documentation
- Defined service parameters and usage volumes
- Dedicated account coordination
- Customised terms or modified attribution conditions

If your organisation requires governed, contractually licensed access to weather data, please refer to our **Enterprise Service**.

Important Policies to Review Before Payment

- License **ODbL**
- **Terms and Conditions of Sale**
- **Privacy Policy**
- **Website Terms and Conditions of Use**

Resources

- **Support Centre**: Submit a ticket if you need further assistance.
- **FAQ**: Quick answers regarding subscription, billing, and product usage.
- **API Documentation**: Detailed examples for each API call and its responses.

By subscribing to any plan above, you agree to our **Terms and Conditions of Sale**, **Privacy Policy**, and **Website Terms of Use**.

Company

OpenWeather is a London-based weather intelligence company serving enterprises, developers, businesses, and researchers worldwide. Through its developer business, the company provides global weather data and forecasting services via fast, reliable APIs, delivering historical, current, and forecast weather data for any location worldwide. Combining advanced meteorology, AI-enhanced forecasting models, and scalable data infrastructure, OpenWeather helps customers integrate weather intelligence into applications, services, and operational workflows.
