

Japan ski campaigns

Meta setup checklist

Promote Japan trip planning to audiences in Australia, the USA, Canada and Japan.

Prepare now. Do not launch yet.

Keep campaigns in draft until commercial weather-data permissions, required endpoint changes and attribution are confirmed. Meta approving an ad does not clear weather-data rights.

Why the launch is on hold

The code review found calls to Open-Meteo's public forecast endpoint. Its free API terms restrict use to non-commercial purposes and explicitly classify commercial products or promotional activities as commercial use.

A free app or a Japan-only campaign does not remove this restriction. A subscription may require switching to the licensed endpoint. Other providers and fallback sources also need checking.

What this guide sets up

- One Traffic campaign with four country ad sets.
- Two ads per country, with language appropriate to the audience.
- Homepage landing links and campaign tracking tags.
- A controlled seven-day test, only after clearance.

Have these ready

- ☐ Access to the feelzlike Facebook Page and ad account.
- ☐ Instagram identity connected, if you want to use it.
- ☐ Permission to use every image, screenshot and logo in the ads.
- ☐ A budget you are comfortable spending.

Prepared 6 October 2026. Meta labels can vary by account. This is practical setup guidance, not legal clearance or confirmation that all provider rights have been checked.

Get the foundations ready

1. Open Ads Manager

Go to adsmanager.facebook.com. Use Ads Manager, not “Boost post”, so you can control country budgets and reporting.

1. Select the correct feelzlike ad account.
2. Confirm the Facebook Page and Instagram identity.
3. Check the payment method, currency and time zone.
4. Do not change account settings simply to match an example in this guide.

2. Check the existing Pixel

Open **Events Manager** and select the existing feelzlike Pixel/dataset. The app already contains consent-gated Meta tracking. Do not install a second Pixel.

1. Open **Test events**.
2. Visit feelzlike in a fresh browser session without an ad blocker.
3. Accept advertising cookies.
4. Confirm a **PageView** arrives.

No event before advertising consent is expected.

Do not bypass consent to improve measurement. This is a pre-launch check, not a claim that live tracking was verified for this guide.

Keep the initial audience setup simple

Do not add uploaded customer lists or website retargeting audiences for this test. Those require a separate privacy and consent review.

- ☐ Correct account, Page and Instagram identity selected.
- ☐ Currency and time zone checked.
- ☐ Consented PageView verified before launch.

Create the campaign draft

3. Campaign settings

Select **Create** → **Traffic**.

Setting	Value
Name	japan winter · traffic · launch test
Buying type	Auction, if shown
Objective	Traffic
Budget allocation	Ad-set budgets, not a shared campaign budget
Special ad category	None for ordinary travel/weather promotion

Use Traffic because a Meta signup conversion event has not been verified. Do not optimise for purchases or registrations yet.

4. Create four ad sets

Ad-set name	Location	Creative
australia · japan trips	Australia	English
usa · japan trips	United States	English
canada · japan trips	Canada	English
japan · domestic ski trips	Japan	Japanese*

1. Set the destination/conversion location to **Website**.
2. Choose **Maximise landing page views**, if available.
3. Set each country under location controls. Location is where the audience is, not where they want to ski.
4. Start with adults 18+, all genders.
5. If audience suggestions are available, use skiing or snowboarding interests that Meta actually offers.

Keep the country as a firm location control. Advantage+ may expand interest suggestions. *For Japan, use Japanese creative only with a suitable Japanese-language landing experience. Otherwise explicitly target an English-speaking visitor audience and rename that ad set accordingly.

Control spend and build ads

5. Choose your test budget

Example only: AUD 280 total media budget

AUD 70 lifetime per country × four countries, over seven days. Applicable taxes and fees may be additional.

Use your account's actual currency. Do not enter "70" assuming Australian dollars if the account uses another currency. If this total is too high, test fewer countries first.

Use a lifetime budget and an end date to control the test. Keep everything in **draft** until clearance. A future start date is not a substitute for leaving it unpublished.

6. Placements and formats

- Start with **Advantage+ placements** and inspect every preview.
- Use **4:5 portrait** images for feeds.
- Use **9:16 vertical** images or video for Stories and Reels.
- The Facebook cover is a Page-header asset, not your only ad creative. Its wide layout is difficult to read in mobile ad placements.

7. Two English-language ad options

Ad 1 • trip planning

planning a japan ski trip? explore mountain forecasts and resort-town information with feelzlike.

Headline: japan ski trip planning

Button: Learn more

Ad 2 • mountain comparison

staying in a japanese ski town? compare nearby mountain forecasts before choosing where to head.

Headline: which mountain today?

Button: Learn more

Use only after licensing clearance. Prepare separate, reviewed Japanese copy for a domestic Japan audience. Avoid "all Japan resorts", "guaranteed powder", "official forecasts" or "live road conditions" unless independently supported.

Check the destination

8. Website URL

Use the homepage, consistent with the existing campaign approach:

```
https://feelzlike.com/
```

In Meta's **URL parameters** field, paste the following as one line, without a leading question mark:

```
utm_source={{site_source_name}}&utm_medium=paid_social&utm_campaign=japan_winter_launch&utm_content={{ad.id}}&utm_term={{adset.id}}
```

Preview the destination on a phone. Make sure visitors can easily find Japan from the multi-country homepage and that the ad's promise matches the experience.

9. Save as draft

Do not click Publish until every launch check is complete.

- ☐ Commercial rights confirmed for every weather provider used by the advertised experience, including fallbacks.
- ☐ Required licensed endpoints, attribution and other terms implemented.
- ☐ Ad screenshots and other creative cleared for advertising use.
- ☐ Mobile homepage and Japan navigation checked.
- ☐ Consented Pixel PageView verified.
- ☐ Language of the ad matches a usable landing experience.
- ☐ All country locations, budgets, currencies and end dates checked.
- ☐ All placement previews checked for cropping and readable text.
- ☐ Owner is satisfied with the final spending limit and ready to launch.

Launch notes

Clearance confirmed by: _____

Approved total media budget: _____

Start date: _____ End date: _____

Measure the test

10. Publish only after clearance

1. Review the final campaign, each ad set and every ad.
2. Check the start date has not passed while the campaign was in draft.
3. When ready, publish in Ads Manager and monitor review/delivery status.
4. After delivery begins, check spending and links promptly for obvious mistakes.

Add these reporting columns

Metric	What to use it for
Amount spent	Confirm spending stays within your planned test.
Landing page views	Measure recorded page loads, not just clicks.
Cost per landing page view	Compare traffic cost between countries.
Outbound click-through rate	Compare how well creative encourages site visits.
Reach and frequency	Watch audience size and repeat exposure.

Compare countries separately. Do not choose a winner solely on cheap clicks. A landing-page visit is not a signup, and consent choices can limit reported website activity.

After the seven-day test

- ☐ Record spend and landing-page results for each country.
- ☐ Check whether visitors actually explore Japan content using available consented analytics.
- ☐ Review the two creative options separately.
- ☐ Decide whether to pause, revise or run another explicitly budgeted test.
