

Bug Report & Ticket List

Full Coverage Smoke Test — 28 June 2026
Prepared for Replit development team by Navigate Work

3 CRITICAL

7 MEDIUM

5 LOW / INFO

10 REGIONS TESTED

SECTION 1 — FIX NOW: Critical Bugs

FL-001 CRITICAL

Weather tab crashes via sidebar nav — Japan (all towns)

Affects:
/yamanouchi/yudanaka/weather
/nozawa-onsen/nozawa-onsen-village/weather
/iiyama/iiyama/weather (all JP towns)

Root cause hypothesis:
Wouter sidebar Link is missing required router state/context that the card link passes. The sidebar navigation is likely not providing the location context needed by the weather component on mount.

Symptom:
Clicking "Weather forecast" in the sidebar throws a full-page "Something broke up the mountain" error that does not self-resolve. The same URL navigated to via the card link on the Today tab loads correctly.

Fix:
Check the Wouter <Link> component in the sidebar for the weather tab. Ensure it passes the same state/context as the card navigation. Add an error boundary with retry logic to prevent full-page crash.

Priority: P1 — blocks core feature for all Japan users

FL-002 CRITICAL

Search result selection crashes — Queenstown routes to /near-you instead of town slug

Affects:
Search bar, homepage

Root cause hypothesis:
The search onSelect handler is sending lat/lng coordinates to the near-you route instead of resolving to the town's slug path.

Symptom:
Searching "Queenstown" returns the correct result. Selecting it routes to /near-you?lat=-45.03&name=Queenstown instead of /queenstown/queenstown, then throws a full-screen error.

Fix:
Fix the onSelect handler to navigate to the town slug path (/queenstown/queenstown) rather than the near-you coordinate route.

Priority: P1 — search is broken for NZ results

FL-003 **CRITICAL**

Nozawa Onsen not in search index — returns US restaurant

Affects:

Search bar, homepage

Symptom:

Searching "Nozawa" returns "Nozawa Sushi & Hibachi, Dillon CO, USA". Nozawa Onsen village (Japan) is not findable via search.

Fix:

Add Nozawa Onsen village to the search data source/index with the correct slug and coordinates.

Priority: P1 — key Japan region unfindable via search

SECTION 2 — FIX SOON: Medium Priority

FL-004 **MEDIUM**

Weather tab intermittent crash on first load — Vic High Country and NZ Queenstown

Affects:

/victorias-high-country/bright/weather
/queenstown/queenstown/weather

Symptom:

"Something broke up the mountain" on first load. Self-resolves on second attempt. Likely a component mount / data-fetch race condition.

Fix:

Add error boundary with automatic retry. Investigate data fetch timing on weather component mount.

Priority: P2

FL-005 **MEDIUM**

No lift status data on any NZ mountain pages

Affects:

/queenstown/mountain/coronet-peak
/wanaka/mountain/cardrona
/mt-hutt/mountain/mt-hutt
/ruapehu/mountain/whakapapa

Symptom:

All NZ mountain pages show no lift open/closed count or lift list. AU mountains have this data.

Fix:

Connect NZ resort lift APIs (Coronet Peak, Remarkables, Cardrona, Treble Cone, Mt Hutt, Whakapapa, Turoa) to the mountain data pipeline.

Priority: P2 — NZ is in active winter season, lift data is critical

FL-006 **MEDIUM**

'No timestamp' shown on all Japan town pages and Tasmania

Affects:

All JP town pages (Yudanaka, Nozawa Onsen, Iiyama, all sub-towns)
/tasmania/ben-lomond-base

Symptom:

The last-updated indicator in the town hero section shows blank/empty ("No timestamp") instead of "Updated just now". Data is live — only the display is broken.

Fix:

Investigate why the timestamp field is null/undefined for JP and TAS regions. Check the data normalisation layer for these regions.

Priority: P2 — affects user trust in data freshness

FL-007 MEDIUM

Roads & Cams tab missing from Tasmania sidebar

Affects:

All Tasmania town pages

Symptom:

Tasmania sidebar does not include a Roads & Cams tab. All other AU regions (Snowy Mountains, Vic High Country) have this tab. May be intentional given limited road network.

Fix:

Add a Roads tab with a graceful "no active road alerts for this region" message (matching the Yamanouchi pattern that links to JARTIC). Or document as intentional.

Priority: P2

FL-008 MEDIUM

Roads & Cams tab missing from Nozawa Onsen — inconsistent with Yamanouchi

Affects:

/nozawa-onsen/nozawa-onsen-village

Symptom:

Yamanouchi has a Roads & Cams tab (linking to JARTIC). Nozawa Onsen does not.

Fix:

Add Roads tab to Nozawa Onsen sidebar matching Yamanouchi's implementation.

Priority: P2

FL-009 MEDIUM

Cookies footer link is a dead anchor (#)

Affects:

Footer on all pages

Symptom:

The "cookies" link in the footer points to # — no cookie policy page exists and the link does nothing.

Fix:

Either create /legal/cookies page with cookie policy content, or wire the link to open the existing cookie consent modal/banner.

Priority: P2 — potential legal compliance issue

FL-010 MEDIUM

/login route renders homepage — no auth UI

Affects:

/login

Symptom:

Navigating to /login renders homepage content with title "feelzlike · weather for resort towns". No login form or auth UI is present.

Fix:

Add /login route to Wouter router mapped to the Login/Auth component. Or redirect to /premium with a login CTA if auth is gated there.

Priority: P2 — blocks all auth-dependent features

SECTION 3 — TIDY UP: Low Priority / Info

FL-011 **LOW****Old URL pattern /roads-and-cams returns SHELL READY page**

Affects:

/victorias-high-country/bright/roads-and-cams (and similar)

Fix:

Add redirect from /roads-and-cams to /roads. Prevents broken bookmarks/SEO issues.

FL-012 **LOW****Mountain URL pattern region/town/mountain 404s — correct is region/mountain/mountain**

Affects:

/victorias-high-country/bright/falls-creek (direct URL access)

Fix:

Add redirect or document the correct URL pattern.

FL-013 **LOW****Hakuba and Niseko redirect to homepage with no 'coming soon' message**

Affects:

/hakuba, /niseko

Fix:

Show a 'Coming soon' placeholder page rather than silently routing to homepage.

FL-014 **LOW****No dedicated mountain sub-pages in Japan green season**

Affects:

/yamanouchi/shiga-kogen (and similar JP mountain URLs)

Fix:

Either create green-season mountain pages (showing hiking/summer conditions) or show a clear message linking to the resort's explore section.

FL-015 **LOW****Country-level pages show no live temperatures**

Affects:

/au, /nz, /jp

Fix:

Consider adding a live data preview to country-level pages for consistency with /countries.

Note: All three country pages are bare region selectors with no live data. The /countries page does show live temps. May be intentional design.

SECTION 4 — Previously Reported — Still Open

1. OWM API key bb79054f9040c8a38dee1e7d903034cf still exposed in JS bundle. Restrict this key to the feelzlike.com referrer in the OWM dashboard immediately.
2. 5 security headers still missing: Content-Security-Policy, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy. Add to server middleware or Cloud Run config.

Both items carried from the security audit conducted 28 June 2026.
